No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 15

Number 1, July 1993

J. Csirik. The Parametric Behavior of the First-Fit Decreasing Bin Packing Algorithm 1

Greg N. Frederickson and D. J. Guan. Nonpreemptive Ensemble Motion Planning on a Tree 29

Carsten Thomassen. The Even Cycle Problem for Planar Digraphs 61

Russel Schaffer and Robert Sedgewick. The Analysis of Heapsort 76

Bjorn Poonen. The Worst Case in Shellsort and Related Algorithms 101

David Hartvigsen. Minimum Path Bases 125

Shietung Peng, A. B. Stephens, and Yelena Yesha. Algorithms for a Core and k-Tree Core of a Tree 143

Hans Bodlaender and Ton Kloks. A Simple Linear Time Algorithm for Triangulating Three-Colored Graphs 160

Corrigendum

Volume 13, Number 1 (1992): David Eppstein, Giuseppe F. Italiano, Roberto Tamassio, Robert E. Tarjan, Jeffery Westbook, and Moti Yung, "Maintenace of a Minimum Spanning Forest in a Dynamic Plane Graph," pp. 33–54 . . . 173

Papers to Appear in Forthcoming Issues 174

Number 2, September 1993

Ingo Althöfer. A Parallel Game Tree Search Algorithm with a Linear Speedup 175

Eric Bach, James Driscoll, and Jeffrey Shallit. Factor Refinement 199

Jim Joichi and Dennis Stanton. An Algorithmic Involution for $p(n)$ 223

Pankaj K. Agarwal, Marc van Kreveld, and Mark Overmars. Intersection Queries in Curved Objects 229

Michael Formann, Dorothea Wagner, and Frank Wagner. Routing through a Dense Channel with Minimum Total Wire Length 267

Xin He. Parallel Algorithm for Cograph Recognition with Applications 284

Pankaj K. Agarwal, Alon Efrat, Micha Sharir, and Sivan Toledo. Computing a Segment Center for a Planar Point Set. 314

Yasunori Koda and Frank Ruskey. A Gray Code for the Ideals of a Forest Poset 324

Papers to Appear in Forthcoming Issues 341

Number 3, November 1993

Joan M. Lucas, D. Roelants van Baronaigien, and Frank Ruskey. On Rotations and the Generation of Binary Trees . . 343

Elias Dahlhaus, Péter Hajnal, and Marek Karpinski. On the Parallel Complexity of Hamiltonian Cycle and Matching Problem on Dense Graphs 367

Judit Bar-Ilan, Guy Kortsarz, and David Peleg. How to Allocate Network Centers 385

Heather Booth and Robert E. Tarjan. Finding the Minimum-Cost Maximum Flow in a Series–Parallel Network 416

Lucas Chi Kwong Hui and Charles Martel. Unsuccessful Search in Self-Adjusting Data Structures 447

Bojan Mohar. Projective Planarity in Linear Time 482

Papers to Appear in Forthcoming Issues 503

Author Index for Volume 15 504

JOURNAL OF ALGORITHMS

Instructions for Authors

The *Journal of Algorithms* welcomes papers on algorithms that are inherently discrete and finite and that have some definite mathematical content in a natural way, either in their objective or in their analysis. Most welcome will be new algorithms and data structures, new analyses or comparisons of known algorithms, complexity studies, and sharply focused review articles of subject areas that are currently active. Among these areas are complexity theory, algorithms on graphs, combinatorial searches and objects, discrete optimization, geometric algorithms, arithmetic algorithms, and methods of algorithmic analysis. The Journal will also include a Problems section.

Manuscripts on NP-completeness and related subjects should be sent to **Dr. David S. Johnson, AT & T Bell Laboratories, Murray Hill, New Jersey 07974.** All other manuscripts should be sent to **Professor Zvi Galil, Department of Computer Science, Columbia University, New York, New York 10027.** Graphs and figures submitted must be of professional quality; see **Figures** below for details.

Problems should be submitted to: **Dr. Peter van Emde Boas, Departments of Mathematics and Computer Science, University of Amsterdam, Plantage Muidergracht 24, 1018 TV Amsterdam, The Netherlands.**

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. It is further understood that any person cited as a source of personal communications has approved such citation; written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Algorithms* represent the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors submitting a manuscript do so on the understanding that if the manuscript is accepted for publication, copyright for the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscripts should be prepared according to the following style rules. Deviation from these rules causes publication delays.

Form of Manuscript. Submit four copies of the manuscript, including the original typewritten copy, preferably triple-spaced, but at least double-spaced, on one side of 8.5 × 11-in. white paper. Number each page. *Page 1* should contain the article title, authors' names, and complete affiliations. At the bottom of page 1 place any footnotes to the title, indicated by superscript *, †, ‡. *Page 2* should contain a proposed running head (abbreviated form of the title) of less than 40 characters and the name and mailing address of the author to whom proofs should be sent.

Abstract. *Page 3* should contain a short abstract (approximately 150 words).

List of Symbols. *Page 4* should be a complete typewritten list of symbols used, identified typographically, not mathematically. This list will not appear in print but is *essential* in order to avoid costly corrections in proof. If the equations in text are handwritten, the symbols list

should be handwritten as well. Distinguish between "oh", "zero"; "ell", "one"; "kappa", "kay"; "vee", "nu"; upper- and lowercase "kay"; etc. Also indicate when special type is required (e.g., German, Greek, boldface, script); all other letters in formulas will be set italic.

Tables. Tables should be numbered consecutively with Arabic numerals in order of appearance in the text. They should be typed double-space and each table should be typed on a separate page. A short descriptive caption should be typed directly above each table and any necessary footnotes (indicated by superscript lowercase letters) should be typed directly below the table.

Figures. Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. All figures should be planned to fit the proportions of the printed page (4.5 × 7.5 in.). Lettering on the original figure should be large enough to be legible after reduction (approximately 50 to 60%). *Differences in type size within a single figure should be no more than approximately 15%.* Standard mechanical lettering sets should be used. Characters should be approximately 3/16-in. high (Leroy lettering size 140). *In addition, symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Graphs should be plotted with black India ink on white paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black.

Photographs must be kept to a minimum. Halftones should be submitted in duplicate. Halftones should be submitted not larger than 6.5 × 4.5 in. Magnifications should be indicated in the figure legends.

Equations. All equations should be typewritten and the numbers for displayed equations should be placed in parentheses at the right margin. References to equations should use the form "Eq. (3)" or simply "(3)". Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent 1/2 wherever possible.

References. Follow the styles shown in the following examples:

1. R. P. Anstee, An algorithmic proof of Tutte's f-factor theorem, *J. Algorithms* **6** (1985), 112–131.
2. M. O. Rabin, Probabilistic algorithms, *in* "Algorithms and Complexity: New Directions and Recent Results" (J. F. Traub, Ed.), pp. 21–39, Academic Press, New York, 1976.
3. T. H. Witten, "Principles of Computer Speech," Academic Press, New York, 1983.

For unpublished lectures or symposia, include the title of the paper, the name of the sponsoring society in full, and the date. For journal names, follow "Abbreviations of Names of Serials" reviewed in *Mathematical Reviews* (*Mathematical Reviews Annual Index*, American Mathematical Society, 1990). Cite references in the text by an Arabic number between square brackets, as [1], [1, 2], [1, Theorem 5], etc. Type references double-spaced throughout.

Footnotes. In text, footnotes should be avoided if at all possible. If they must be used, identify them by superscript Arabic numerals in order of their appearance and type them together on a separate page, double- or triple-spaced.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of original composition.

Reprints. Fifty reprints (without covers) of each article will be provided free of charge. Authors may purchase additional reprints; an order form will be included with the proofs.

ADVANCES IN APPLIED MATHEMATICS

Interdisciplinary in its coverage, *Advances in Applied Mathematics* is dedicated to the publication of original and expository articles on all aspects of applied mathematics. Over the last ten years, *Advances in Applied Mathematics* has published research papers written by many of the foremost applied mathematicians of our time.

Editor
Gian-Carlo Rota
Massachusetts Institute of Technology, Cambridge

The journal emphasizes papers that represent a substantial advance in their field and features articles on:

- Discrete applied mathematics
- Statistics
- Mathematical biology
- Dynamical systems
- Algorithms
- Experimental mathematics
- Theoretical computer science

The journal is an excellent source of current information for:

- Mathematicians
- Computer scientists
- Applied mathematicians
- Physicists
- Statisticians
- Biologists

Volume 14 (1993), 4 issues
In the U.S.A. and Canada: $150.00
All other countries: $189.00
ISSN 0196-8858

Sample copies and privileged personal rates are available upon request.

A Unifying Theme of the Sciences...

Journal of Complexity

Editor
Joseph F. Traub, *Columbia University, New York City*

The **Journal of Complexity** publishes original research papers that contain substantial mathematical results on complexity as broadly conceived. In the area of computational complexity, the journal focuses on problems that are approximately solved and for which optimal algorithms or lower-bound results are available. The **Journal of Complexity** publishes papers that provide major new algorithms or that make important progress on upper bounds. It also addresses such complexity topics as physical limits of computation; chaotic behavior and strange attractors; and complexity in biological, physical, or artificial systems.

Research Areas Include Complexity Results in

- Applied mathematics
- Approximate solution of hard problems
- Approximation theory
- Control theory
- Decision theory
- Design of experiments
- Distributed computation
- Image understanding
- Information theory
- Mathematical economics
- Numerical analysis
- Parallel computation
- Prediction and estimation
- Remote sensing
- Seismology
- Statistics
- Stochastic scheduling

Volume 9 (1993), 4 issues
ISSN 0885-064X

In the U.S.A. and Canada: $135.00
All other countries: $163.00

Sample copies and privileged personal rates are available upon request.
